

**South Carolina State Inpatient Databases (SID)
2000**

Errata Sheet

The 2000 South Carolina State Inpatient Databases (SID) issued prior to February 2004 are missing external cause of injury codes (E Codes). No other South Carolina SID records are affected.

The enclosed version of the 2000 South Carolina SID includes these previously missing E Codes. Any missing cause of injury code or place of injury code was placed in the first available secondary diagnosis field. For example, if a discharge originally had four secondary diagnoses coded in data elements DX2-DX5, then the cause of injury code and place of injury code were saved into DX6 and DX7.

The addition of these E Codes increases the number of discharges in the South Carolina SID that have at least one E Code present in the diagnosis fields from 24,812 discharges (4.3% of the discharges) to 43,203 discharges (8.4% of the discharges).
